LinkedIn
linkedin.com/in/dipakchandranp

Portfolio
dipakchandranp.github.io

SKILLS

Frontend
React, TypeScript, JavaScript, CloudScape, HTML5, SCSS, Zustand

Build & Test
Vite, Webpack, Jest, Vitest, Playwright, Puppeteer, Storybook

Backend & Cloud
Node.js / Express, Python, AWS Lambda, CloudFormation, Data Firehose, Amazon Bedrock

Ways of Working
Design systems, Data visualization, A/B experimentation, Cross-functional squads, Mentoring

EDUCATION

M.C.A., Computer Applications
Cochin University of Science & Technology
2009 – 2012

B.Sc., Physics
Calicut University
2005 – 2008

LANGUAGES

English — Full Professional

AWARDS

Employee of the Year, 2016–2017

EXPERIENCE

Frontend Engineer Jun 2022 – Present Amazon Web Services (AWS) · Dublin

Customer-facing frontend for AWS CloudWatch, one of AWS's largest observability services, used by millions of customers worldwide.

Tech: React, TypeScript, SCSS, CloudScape, Redux-Saga, Zustand, Vite, Webpack, Playwright, Node.js

- **AI Investigations Console:** built the front end for an AI-assisted operational investigations experience that correlates signals across metrics, logs, alarms with guided onboarding. Worked on a cross-functional squad with Product, Design/UX, and Applied Science / AI-ML.
- **Metric Streams - partner integrations & global expansion:** built the partner-integration front end (dynamic partner-config forms, template generation, full create/edit/list/detail lifecycle) for near-real-time metric streaming to third-party monitoring partners, and redesigned the metric-name filtering UI. Led multiple new AWS regional launches with their monitoring/canary setup, working with Product, external partner engineering, and regional/compliance stakeholders.
- **Self-service metric-onboarding tool -** built a full-stack internal tool end-to-end, from UI form through an automated ticket-and-code-change workflow, letting service teams self-serve onboarding of human-readable metric labels and replacing a manual config process. React, TypeScript, Node.js/Express, AWS Lambda.
- **Visual drag-and-drop UI builder (self-initiated) -** built a proof-of-concept solo: a three-pane visual builder plus a code-generation backend that exports production-ready React components and unit tests from a drag-and-drop canvas. Explored with a design-system engineering team.
- **Engineering quality - E2E test frameworks:** authored two reusable frameworks adopted across teams - an LLM-agent E2E framework running natural-language UI flows (Python, Amazon Bedrock, browser automation on AWS Fargate), and a deterministic Playwright visual-regression suite with an API-mocking layer that makes chart snapshots byte-stable, resolving chronic flakiness.
- **AI/LLM feedback-triage platform:** built an internal tool that automatically categorizes, clusters, and routes incoming product feedback to the owning team so recurring themes surface and get acted on faster. Designed and built the end-to-end serverless pipeline (ingest → classify → cluster → attribute → summarize) and the dashboard front end, including an in-app loop that lets teams act on clustered feedback directly. With Product, Design/UX, and engineering teams as users. *React, TypeScript, Node.js, AWS Lambda, Step Functions, DynamoDB, S3, Amazon Bedrock, D3.*
- **Save/reuse query API service:** designed and leading the build of a new backend API service that lets users durably save and reuse their monitoring queries across sessions: owning the API contract, service implementation, and client, and drove a cross-team API design review that reshaped the contract. With Product, senior/principal engineering reviewers, and an adjacent team owning a related capability. *Java, AWS Lambda, API Gateway, DynamoDB.*

Staff Software Application Engineer Oct 2021 – Jun 2022 Extreme Networks · Bangalore

Frontend for ExtremeCloud IQ, a cloud-driven network management platform for wireless access points, switches, and routers.

Tech: React, TypeScript, Redux, SCSS

- Built UI for the network-monitoring experience - visualizing device health, alarms, and real-time performance - and contributed reusable elements to the shared design system used across the suite.
- Collaborated with backend and UX teams to deliver data-rich monitoring views for large-scale enterprise deployments.

Technical Lead May 2020 – Sep 2021 Sourcebits Digital · Bangalore

Technical lead on CloudTV for ActiveVideo (San Jose, CA), delivering new TV experiences across devices at scale.

Tech: React, TypeScript, Redux, Node.js, SCSS, Webpack

- Led frontend architecture and technical direction for the CloudTV management UI - component design, state management, and API-integration patterns.
- Owned code reviews, release quality, and mentoring of frontend engineers on the team.

Frontend Lead Mar 2018 – Mar 2020 Milaap · Bangalore

Led frontend for South Asia's largest crowdfunding platform for personal and healthcare causes, serving millions of users.

Tech: React, Redux, Webpack, Babel, SCSS, Node.js

- Led migration from a legacy stack to React, modernizing the codebase and setting the foundation for faster feature delivery.
- Managed and mentored a team of 4 frontend engineers — owning code reviews, technical direction, architecture decisions, and release quality.
- Shipped core features across fundraiser creation, donation flows, campaign pages, and donor experiences, and established frontend best practices for reusability and build tooling.

EARLIER EXPERIENCE

Sr. Interactive Developer — Echidna · 2014 – 2017 · eCommerce storefronts on the Kibo (Mozu) platform; Backbone.js, jQuery, Node.js, early React/Angular.

Sr. Software Engineer — thinkIIT · 2015 – 2016 · EdTech learning platform (IIT-JEE / NEET); full-stack with Python & Django.

Software Engineer — Asklepian Technologies · 2012 – 2014 · EHR-based hospital automation system; frontend & backend with Java, JSF/PrimeFaces.
